The AI suggests, the rules engine decides, and privacy is built in

Main components and data flows, with DPDP Act 2023 controls.

SOLUTION ARCHITECTURE

DPDP ACT, 2023 · BUILT INTO THE FLOW

- **Consent**
  Separate yes/no consent before any upload, logged with time
- **Purpose limitation**
  KYC data used only for activation and billing, not marketing
- **Data minimisation**
  Only needed fields kept; PAN digits in GSTIN are masked
- **Storage limitation**
  Images deleted 30 days after activation; only a hash is kept

SMART KYC ON THE 12 SPECIMEN APPLICANTS

K01	K02	K03	K04	K05	K06
K07	K08	K09	K10	K11	K12

4 flagged: cancelled GSTIN · unreadable GST cert · missing Udyam · old address proof

The LLM never sets a price or approves KYC — catalogue rules and registry data do, with an audit trail.

Nothing new to build

All 4 bundles come from the existing 25-product catalogue.

Partners stay in the loop

Self-serve sales are QR-tagged, so the local partner still earns.

Trust from verified data

GSTIN leads activate ~5× more; we verify them in seconds.

Our gap is price, not scope: one bill for everything the shop needs, from ₹1,996 a month.

Field force and partners: they gain, not lose

- **Partners:** sell in assisted mode, earn on QR-tagged sales
- **Field sales:** call a ranked list of unclosed leads
- **Complex deals:** multi-site and factory stay field-led

Risks covered: AI errors → rules engine · channel conflict → QR commission · low digital comfort → assisted mode.
